

## Roofing No. 3015

**Subject: EPS Roofing Compatible Adhesives**

**Date: July 2012 (Revised February 2015)**

Foam-Control EPS is often used as a component of a roof assembly and is attached with the use of mechanical fasteners or adhesives. Adhesives provide a convenient method for installation of Foam-Control EPS products, however, the use of adhesives which are specifically designed for use with polystyrene foams must be used. Some roofing adhesives contain solvents or other additives which can damage polystyrene foams.

The following adhesive manufacturers recommend specific products for use with polystyrene foams. Please contact both the adhesive and roofing membrane system manufacturers directly for their installation recommendations.

### **3M**

3M Brand Adhesives  
(800) 362-3550
